EDUCATION

Dharmsinh Desai University, Nadiad,
Bachelor of Technology in Computer Engineering

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks, Software Engineering.

TECHNICAL SKILLS

Languages: C++, C, Java, JavaScript, Python, PHP, HTML, CSS

Frameworks & Libraries: Spring, Spring Boot, Django

Databases: MySQL, Firebase

Tools & Technologies: Git, GitHub, VS Code, XAMPP

Core Concepts: Object-Oriented Programming (OOP), Data Structures & Algorithms, REST APIs, MVC Architecture, File Handling, Database Design

PROJECTS

Hospital Management System | C++, OOP, File Handling

- Developed a management application using C++ with OOP principles to streamline patient record management and appointment scheduling.
- Implemented Encapsulation and Inheritance for modular, maintainable code architecture.
- Utilized file handling for persistent data storage, enabling reliable record retrieval and updates.
- Designed an intuitive command-line interface (CLI) for efficient user navigation and interaction.

Code Master Technology – Computer Coaching Classes Website | HTML, CSS, JavaScript, PHP

- Designed and developed a dynamic website for a computer coaching institute to showcase courses and institute information.
- Implemented interactive features using JavaScript and handled form submissions with PHP for backend functionality.
- Applied responsive design principles with CSS to ensure consistent layout across different devices.

CODING PRACTICE & ACHIEVEMENTS

- **LeetCode:** Solved 300+ problems, consistently improving problem-solving and algorithmic skills.
- **Problem Solving:** Actively practicing on platforms like LeetCode and Codeforces to strengthen data structures and algorithms expertise.
- **Continuous Learning:** Expanding backend development skills by learning Spring, Spring Boot, and REST API development alongside consistent DSA practice.

EXPERIENCE

Software Development Projects

- **FundLedger – Financial Tracking Backend System** | Java, Spring Boot, REST APIs, MySQL:
Designed and developed a backend system for managing financial transactions and expense records. Implemented RESTful APIs using Spring Boot to handle transaction creation, retrieval, and updates. Integrated MySQL database for persistent storage of financial data and user records. Applied MVC architecture and layered service structure for clean code organization.
- **Java Spring Boot Backend Project:** Building REST APIs using Spring Boot and implementing MVC architecture. Practicing dependency injection, controller-service-repository architecture, and database integration. Connecting backend services with MySQL database for CRUD operations.
- Collaborating with peers, following version control practices using Git, and applying software development lifecycle principles to complete projects efficiently.
